

FIREGUARD
JOCKEY FIRE PUMP CONTROL PANEL
Brochure

Reliable Pressure Control. Proven Performance.

www.bkbgroup.com.au

PRODUCT OVERVIEW

The Fireguard Jockey Pump Control Panel is an Australian-designed solution engineered to maintain system pressure and support reliable fire protection performance. Built with industrial-grade components, it delivers consistent operation in demanding environments where reliability is critical.

Designed to automatically manage pressure and support the main fire pump during standby operation, the panel offers clear system indication, dependable control, and long-term durability. UL Certified, it complies with AS 2941-2013, making it suitable for commercial, industrial, and infrastructure applications.

KEY FEATURES

- ✓ Available in 240V single phase and 415V three phase
- ✓ Heavy-duty 2mm galvanised IP54 enclosure
- ✓ Powder-coated finish with UV-rated labels
- ✓ Industrial-grade components for long-term reliability
- ✓ Simple, robust design for dependable operation
- ✓ Designed for easy servicing and maintenance
- ✓ Suitable for all fire protection applications
- ✓ Compact, space-efficient layout

SAFETY & OPERATION

The Jockey Pump Control Panel is designed for safe, automatic operation with clear visual indication of system status.

Operational Features:

- ✓ Automatic start via pressure switch
- ✓ Manual isolation capability
- ✓ Pump run and fault indication
- ✓ Overload protection
- ✓ Battery-backed operation counter
- ✓ Clear fault identification via LED indicators

High-quality electrical components

Heavy-duty 2mm galvanised IP54 enclosure

Industrial-grade switchgear and control components

UL Certified

UV-resistant powder coating

UV-rated laminated labels with operation and warning outlines

ELECTRICAL & MONITORING CAPABILITIES

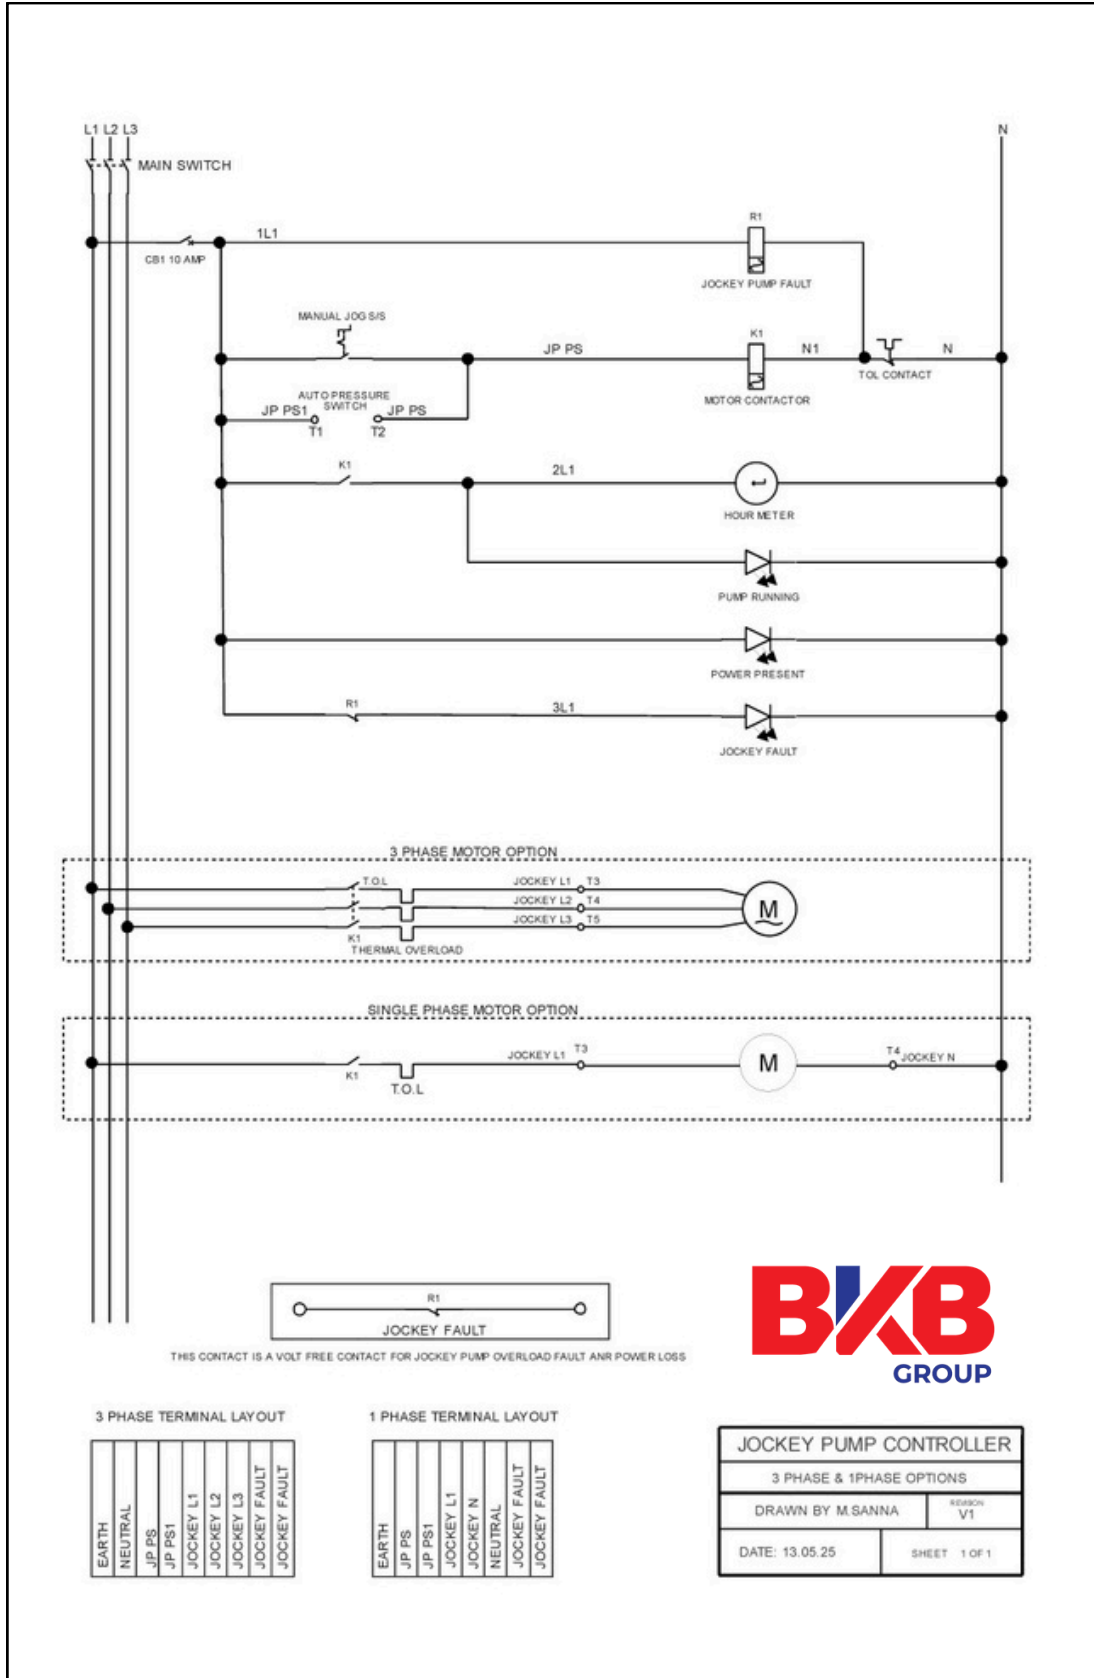

- 240V single-phase or 415V three-phase supply
- Integrated contactor and overload protection
- Battery-backed counter
- Volt-free contacts for remote monitoring
- Visual indicators for:
 - Power present
 - Pump running
 - Fault condition

These features provide clear system visibility and ensure fast response during fault conditions.

APPLICATIONS

- Fire protection systems
- Commercial and industrial buildings
- Pump rooms and booster systems
- Infrastructure and utilities
- New installations and system upgrades
